6 REASONS FOR TOMAS® PI

Delivery in sterile blister packaging, including healing cap.

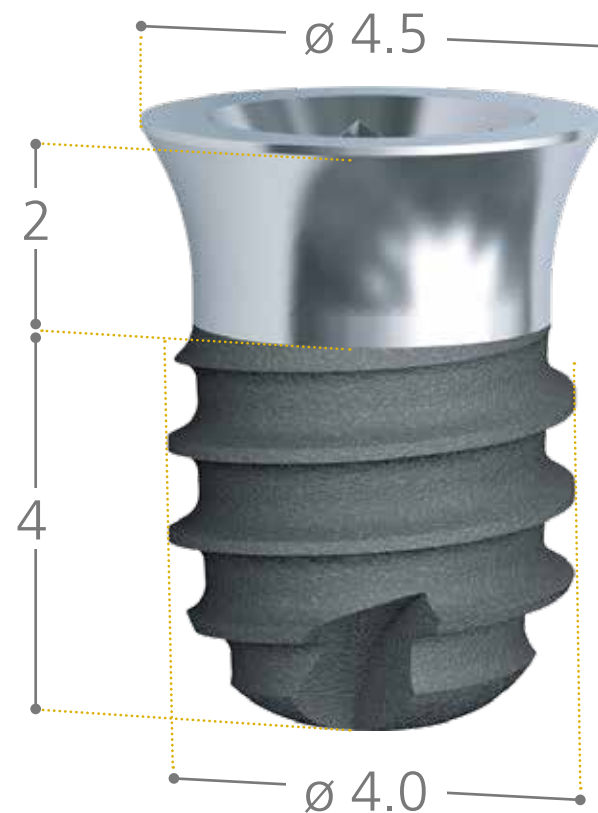

Success in a few steps.

- 2 drill sequences and the self-tapping threads facilitate implantation.
- The tulip-shaped neck in combination with the convex healing cap reduces gingiva overgrowth.

Machine cleaning and disinfection of the fully loaded instrument holder for efficient work processes.

Universal abutment serves as closure cap during healing phase and as coupling element for the appliance during treatment phase.

- Additional abutments for direct and indirect coupling available.

Digital and analog workflow possible.

Easy explanation using the tools available in the tomas® PI-tool set.
